# CHRYSLER

## Y160C-PHT

You must have 2 already programmed Sentry™ Keys to make SPARE KEYS. If you only have one programmed key OR if the keys are lost, other equipment is required to program a new key.

### CREATING SPARE KEYS

The vehicle can only accept up to 8 total Sentry™ Keys.

1. Cut mechanical code on the Sentry™ Key blank. Jet No. Y160C-PHT and set this duplicate aside for the time being.
2. Insert one of the two preprogrammed Sentry™ Keys into the ignition lock and turn it on the "ON" position.
3. Leave ignition in the "ON" position for 5 to 15 seconds and now turn to "OFF" & remove key.
4. Within 15 seconds, insert the 2nd preprogrammed key into the ignition and turn it "ON".
5. In about 10 seconds the Sentry™ Key Immobilizer System is put into the Customer Learn Mode. A single chime will sound and/or the Vehicle Theft Security System Lamp flashes. The Learn Mode remains "ON" for 60 seconds. Use this time to turn the key to "OFF" and remove it. AND.....
6. Insert the new duplicate key from Step 1 into the ignition and turn it "ON" for about 10 seconds.
7. After about 10 seconds have passed the chime will sound and the Vehicle Theft Security System Lamp will stop. Wait 5 seconds and turn key to "OFF" position. The new duplicate is now programmed.
8. To program additional Sentry™ Keys, follow Steps 1 thru 7. Remember, the vehicle can only accept up to 8 total keys.

**NOTICE:** If someone tries to use a 'wrong key' or bypass the cylinder, the Sentry™ Key Immobilizer Module will fail to identify a recognizable Transponder Identifier. Two additional unsuccessful tries causes a message to be sent to the Power Train Control Module which in turn disarms the vehicle's fuel system. Continued failed attempts with the wrong key will also disarm the starter. The Chrysler dealer may have to be contacted for service.

We suggest that you consult the customer's vehicle owners manual before following ANY procedure you believe to be correct.

### OFFICIAL LICENSED JET CHRYSLER KEY BLANKS

### TRANSPONDER

# FORD

You will encounter FORD 1 Key System AND Ford 2 Key System Vehicles. You may be able to predetermine which of the two PATS Systems applies to the vehicle at hand by utilizing the following two charts. Early model year production may deviate.

## FORD VEHICLES 1 KEY SYSTEM APPLICATIONS:

**1997 (and earlier) Ford:** Expedition, Mustang and Taurus

**Mercury:** Sable

**1998 Ford:** Expedition and Contour.

**Lincoln:** Navigator - **Mercury:** Mystique

### 1 Key System Procedure

➡ **Duplicating:** Place original key in ignition and turn to "ON" position. On some models a theft security light should turn on. Wait a few seconds until light turns off. Remove original key and insert new duplicate transponder key. (Removal of original and insertion of duplicate must be done within 10 seconds). Theft security light will turn on for a few seconds. When light turns off, duplicate key is programmed. A maximum of 16 total keys can operate these vehicles.

➡ **Originating:** Make an operating transponder key by code or fitting. Insert new transponder key in ignition and turn to "ON" position. Theft security light will stay on for 10 to 15 minutes. (Some models may use a flashing light). When the theft security light turns off, turn new transponder key to "OFF" position. Repeat this two more times. (Each cycle must be started within 5 minutes after the theft security light turns off). After third cycle, new key will operate vehicle. Any key which formerly operated the ignition will now be inoperative.

## 2 Key System Application:

**1998 Ford:** Crown Victoria, Explorer, Mustang and Taurus

**Lincoln:** Continental and Town Car

**Mercury:** Grand Marquis, Mountaineer and Sable

**1999 Ford:** Contour, Expedition, F-Series, Ranger V6 and Windstar.

**Lincoln:** Navigator - **Mercury:** Cougar and Mystique

All Transponder equipped Ford vehicles from 2000 on.

### 2 Key System Procedure

➡ **Duplicating:** TWO ORIGINAL KEYS MUST BE PRESENT. Duplicate correct cuts onto a new transponder key. Insert first original key into ignition lock and turn to "ON" position for 3 to 5 seconds. Remove first key from ignition lock. Within 5 seconds, insert a second, different original key into ignition lock and turn to "ON" position for 3 to 5 seconds. Remove the second original key from ignition lock. Within 10 seconds, insert the new duplicate key into ignition lock. Turn new key to "ON" position for at least one second. Repeat entire sequence if additional new duplicate keys are being programmed. A maximum of 8 total keys can operate these vehicles.

If only one original key is available or if keys are lost, programming requires a New Generation Star Tester (NGS-XL).

We suggest that you consult the customer's vehicle owners manual before following any procedure you believe to be correct.

Ford transponder keys for the year 2004 models, and for all prior years can be made without an original key. The NGS-XL plugs into the vehicle and will create a new key. The NGS-XL also duplicates remotes.

## LEARNING ADDITIONAL PASS-Key III IGNITION KEYS (QUICK LEARN)

The first key used in this procedure must not be a valet key (gray in color). A valet key will not allow you to learn additional keys. Additional keys (up to 10) may be programmed using the following procedure if a valid (learned) key is available for that vehicle.

To "learn" another PASS-Key®, it is necessary to first create a duplicate of the mechanical cut of the current key. The ignition key being learned must be read by the PASS-Key III® module in the following sequence. A driver's key must be used to "learn" any additional keys.

This procedure is for "learning" additional keys not only for replacing a key due to loss of all currently programmed keys.

1. Insert the valid normal driver's key (black in color) and start the vehicle.
2. Once the vehicle has started, turn the ignition switch to the off position and remove the key.

### IF THE VEHICLE DOES NOT START USE THE "AUTO LEARN" PROCEDURE.

3. Insert the key to be "learned" and rotate it to "RUN" within ten seconds of removing the previously used key.
4. The "Security" telltale will turn off once the key has been learned. It may not be apparent that the "Security" telltale went on due to how quick it "learns" the new key.
5. Repeat these steps to program additional keys now if customer so desires.

## AUTO LEARN PROCEDURE

### Replacing Lost PASS-Key III® Ignition keys

To replace a lost PASS-Keys III® if all currently programmed keys are lost, it is necessary to determine the mechanical cut. Mechanical codes are recorded on the vehicle invoice. If these codes are available, use them to create a new key. If they are not, follow the procedure below.

The mechanical cut must be determined first. The mechanical cut can be determined from the key code on the ignition lock cylinder or from the original key "knock outs." If the mechanical cut cannot be determined, the ignition lock cylinder must be replaced.

To "learn" the new PASS-Key III® key, use the following procedure:

1. Insert a valid mechanical cut key and rotate it to "RUN".
2. The "SECURITY" telltale will remain on solid for the length of the auto-learn timer (10 minutes)
3. When the auto-timer expires, the telltale will turn off.
4. Once the telltale turns off, remove the key.
5. Repeat Steps 1-4 two more times (total of 30 minutes)
6. Insert the newly learned key into ignition cylinder and turn to "RUN." The "SECURITY" telltale should remain off indicating the new key has been learned.
7. Any additional keys (up to a maximum of 10) can be learned using the "Learning PASS-Key III® Ignition Keys (Quick Learn)" in this section.

*We suggest that you consult the customer's vehicle owners manual before following ANY PROCEDURE you believe to be correct.*

### TO AVOID GOING TO THE AUTO TO DUPLICATE KEYS

**No need to go out to your customer's car**

- A. Use GM97-N-PHT, GM99-N-PHT, GM103-N-PHT Blanks
- B. Use Jet's ETD-1-JR to decode and duplicate codes.
- C. Duplicate cuts on your standard key machine

#### NOTE

The ETD-1-JR will notify you if ON BOARD is required  
SEE BACK COVER FOR DETAILS

EASY TO USE  
CLONE **JET** and ALL Manufacturers'  
CLONEABLE KEYS \*  
*In Less Than 30 Seconds*

ACURA	BUICK
CADILLAC	CHEVROLET
DAEWOO	HONDA
INFINITI	MAZDA
NISSAN	OLDSMOBILE
PONTIAC	

**AVOIDS AUTO "ON BOARD"  
PROGRAMMING**

No Need To Go To The Auto

**4 SIMPLE STEPS**

1. Put original key in slot, push **READ**.  
All transponders Identified
2. Push **READ** - Secret Code Identified
3. Push **READ** - OK to put in new key
4. Push **WRITE** - FINISHED !
